

Empirical Results

The following graph shows the average delays of packet going through our switch, which has been implemented with VOQs. The switch was tested with 40000 entries in our hash tables.

Here are the exact numbers of the results:

Packet Density	Average Packet Delay (ms)
40	1.498
50	1.991
60	2.162
70	2.471
80	2.540
90	2.750
